

KornPlex

A Corn Product from Pacific Ethanol, Inc.

KornPlex is a moderate moisture corn product developed to bring value to Western Dairy producers.

KornPlex utilizes Wet Distillers Grain in combination with other corn products to establish a superior feed ingredient with the high quality values of processed corn products included in today's high energy diets required by Western dairy cows.

KornPlex was developed as an alternative to the high price of today's simple processed grains and establishes a position within current and future pricing strategies allowing producers to use a superior quality ingredient without additional cost.

KornPlex exhibits additional value through enhanced ration digestibility by the inclusion of active enzymes, bringing value in digestibility and increased animal performance.

KornPlex

Guarantee Analysis

Moisture not more than**45.0%**
